

# HOW TO MANAGE HUMAN REMAINS

## 7 STEPS TO MANAGE HUMAN REMAINS IN EMERGENCIES

### 1) BE PREPARED

Have access to all necessary equipment, including body tags and bags, writing implements, forms and cameras.

### 2) TAG REMAINS AT RECOVERY

Use a unique identification number. Write this number on a durable body tag and attach it to the body/body part and the body bag.

### 3) TAKE PHOTOS

Photograph the human remains and all associated artifacts before moving them.

### 4) RECORD INFORMATION

Record contextual information before moving the human remains. Use standardized digital forms to collect information about each body and ensure consistency of data.

### 5) ONE CASE PER BAG

Only put one case in each bag. Don't mix! If there is a question of whether items belong together, keep them separate and make notes.

### 6) DATA MANAGEMENT PLAN

Have a system to consolidate, store and access information related to each case.

### 7) STORAGE OF REMAINS

If bodies are buried, make sure they are marked with a durable grave marker with a digital record of the burial data.
